Good Design Award for the design of Drug Delivery Devices by Sensile Medical

Düsseldorf (D)/Olten (CH)/Chicago (IL, USA), April 15, 2019. The micro pump-equipped drug delivery devices of Sensile Medical, a subsidiary of Gerresheimer AG, have an unmistakable design. The design was the creation of Team Consulting, an agency based in England which in 2018 received the renowned Good Design Award in the category "Medical 2018" for its work. At CPhI North America in Chicago Sensile Medical will be showcasing its innovative solutions for digital and electronic drug delivery devices at the Gerresheimer booth no. 1227 from April 30 up to May 02.

"We are continuously working on improving quality of life for patients who rely on injection aids," says Sandra de Haan, CBO at Sensile Medical. With SenseCore micro pump technology, Sensile Medical ensures the safe, simple, and precise administration of liquid drugs by the patient themselves at home or on the move, and always with absolute reliability. This injection aid is impressively simple and discreet to use and the patient does not see the needle, making it suitable for all manner of different applications.

In 2017, Sensile Medical commissioned the British agency Team Consulting, which specializes in medical devices, to package these requirements and attributes of its drug delivery devices in a patient-friendly design. The Chicago Athenaeum Museum of Architecture and Design Good Design Award is the world's oldest and most prestigious design award, open to manufacturers, companies and emerging start-up businesses.

This is what the jury at the Good Design Awards based their decision on

The Sensile Medical Design Language provides a unified look across a range of injection devices. Different product varieties can be clearly identified as belonging to a single family with key attributes of the Sensile technology – the flexible modular approach and low-cost disposable component.

The Sensile family of products addresses many of the key user and commercial concerns that surround wearable injection devices; namely ease of use, comfort, discretion, reduction of waste, flexibility and ease of customization.

By creating a uniform product family range from a coherent design language, Sensile's range is significantly strengthened. Its customers in particular rely on the devices offering a consistent user experience, independent of the primary packaging for medication.

Sensile Medical Design Language

The modular structure of the device reduces waste.

About Team Consulting

Team Consulting specializes in design development for medical devices. Together with pharmaceutical companies, Team Consulting has been developing drug administration systems for over 30 years, and has made a name for itself in the areas of respiratory disorders and parenteral drug administration.

About Sensile Medical AG

Founded in 2004, Sensile Medical AG is a Swiss medical technology company that has been a subsidiary of Gerresheimer AG since 2018. Working with pharmaceutical companies, it develops devices to deliver liquid drugs for the best level of treatment. The patented SenseCore technology forms the heart of the system. The micro pump is extremely precise in dosage. The products are characterized by modularity and flexibility. Sensile Medical has a workforce of some 120 employees at its headquarters in Olten, Switzerland. www.sensile-medical.com

About Gerresheimer

Gerresheimer is a leading global partner to the pharma and healthcare industry. With specialty glass and plastic products, the Company contributes to health and well-being. Gerresheimer operates worldwide and its approximately 10,000 employees manufacture products in local markets, close to its customers. With our plants in Europe, North America, South America, and Asia, we generate revenues of approximately EUR 1.4 billion. The comprehensive product portfolio includes pharmaceutical packaging and products for the safe, simple administration of medicines: insulin pens, inhalers, micro pumps, prefillable syringes, injection vials, ampoules, bottles, and containers for liquid and solid medicines with closure and safety systems as well as packaging for the cosmetics industry.
